Economical

Easy

Exact

What Is Builda Price?

Builda Price is a cloud based software solution, created specifically to enable builders to quickly and accurately price a job, then back-cost so you know your true costs.

No longer are jobs costed on rule of thumb estimations. By using the Builda Price software a builder can create accurate pricing quotes while reducing the time required to do so.

Jobs Back-Costed

Features

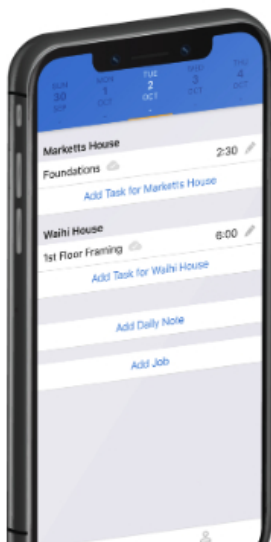

Pricing

Accuracy, Speed and Efficiency is achieved with the smart systems that Builda Price provides. Labour costs are generated by the program and then compared to the builder's own estimate, improving the accuracy in builders' high risk area of labour allocation. Flesh out the remainder of the job through the use of our simple templates and overheads calculators. Within an hour or two an entire job can be accurately costed start to finish. With Builda Price at your side you can price jobs with confidence, knowing exactly where your break-even point lies.

Back-costing

Keep on top of your build with the Builda Price Backcoster. Import jobs directly from the pricing program and compare estimated budgets with actual costs as they arise in real time. Back-costing will help you maintain profitability and creates an accurate record of costs for use when pricing future jobs. Supplier invoices can be imported and assigned to the appropriate job and work section, thereby maintaining the utmost simplicity and transparency when compared to estimated costs vs actual.

Timesheeting

This simple yet powerful tool allows builders to track their progress against estimated man hours and expenditures on each job. Builders can quickly log hours on the go using the app that automatically feeds back into the Builda Price Backcoster. Stay in control of your project as app data is used to track expected cost and job progress against actuals in real time.

One Price

\$195.00

NZD / MONTH

All the features. Unlimited users & unlimited jobs.

One off setup and training costs of \$550
